Add and remove credentials

Add and remove cloud provider credentials from your account at any time. The Astra beta program uses these credentials to discover clusters, apps on a cluster, and to provision resources on your behalf.

Note that all users in Astra share the same sets of credentials.

Add credentials

The most common way to add credentials to Astra is when you add a cluster, but you can also add credentials from the Account page. The credentials will then be available to choose when you add your next Kubernetes cluster.

What you'll need

You should have the service account key file for a service account that has the required permissions. Learn more.

Steps

1. Click **Account** > **Credentials**.
2. Click **Add Credentials**.
3. Enter a name for the credentials that distinguishes them from other credentials in Astra.
4. Provide the Google Cloud service account key file either by uploading the file or by pasting the contents from your clipboard.
5. Click **Add credentials**.

Result

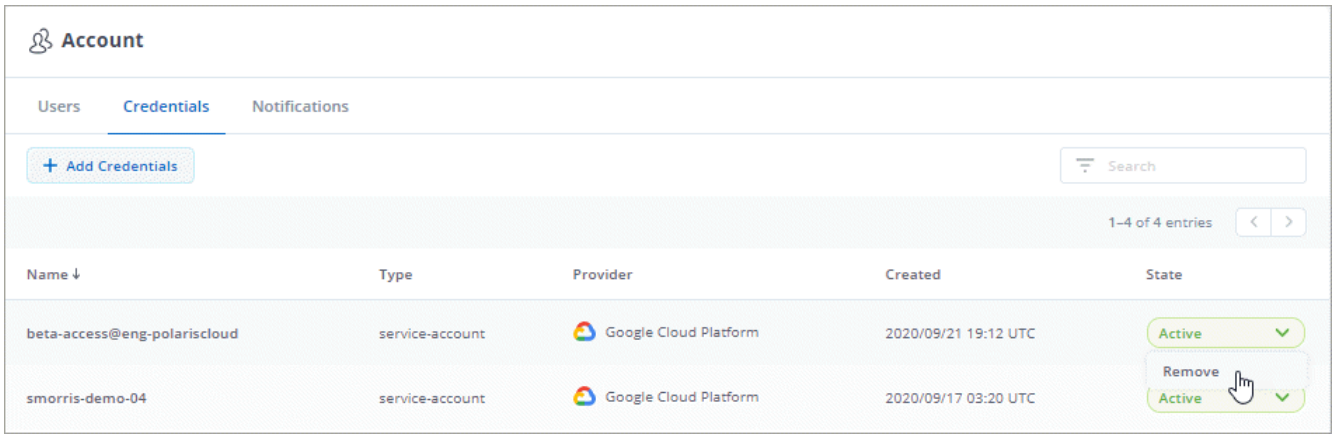
The credentials are now available to select when you add a Kubernetes cluster to Astra.

Remove credentials

An Account Owner can remove credentials from the account at any time.

Steps

1. Click **Account** > **Credentials**.
2. Click the drop-down list in the **State** column for the credentials that you want to remove.
3. Click **Remove**.



4. Type the name of the credentials to confirm deletion and then click **Yes, Remove Credentials**.

Result

Astra removes the credentials from the account.
